5 Decision ........................................................................................................................................32
1 Introduction

Study programs in Romania require authorization for provisional functioning, as established by Law no. 87 of 2006, which approved the Emergency Decree no. 75 of 2005. The Romanian Ministry of Education, Research, Youth and Sport is responsible for authorizing provisional functioning of study programs. According to the Law of National Education no.1 of 2011 (hereinafter “Law of National Education”) Art. 150, Par. 1, the decision of whether to grant authorization is contingent upon the evaluation and subsequent recommendation of the study program by an external quality assurance agency registered in the European Quality Assurance Register (EQAR).

After authorization for provisional functioning has been granted by the Romanian Ministry, the applicant higher education institution may enroll students in the respective study program. Following the successful graduation of three subsequent cohorts (taking approximately five years for three year study programs), the higher education institution must submit its application for accreditation. The accreditation procedure is similar to that for authorization for provisional functioning: an external evaluation by an EQAR-listed quality assurance agency, takes place on the basis of which the Government decides whether to accredit the study program.

The AHPGS Accreditation Agency was tasked with accrediting Bachelor study programs offered by the Dimitrie Cantemir University, Targu Mures, Romania.

In September 2017, to the experts were forwarded the relevant documents for the evaluation of the program and to review the available information, determine particular strengths and weaknesses, and identify any open questions regarding the study programs in writing.

The on-site visit of the University took place on March 11-13, 2018. In the course of the on-site visit, experts conducted discussions with the University management, representatives of the faculties, the teaching staff of the programs as well as with students currently studying in the programs. Furthermore, they inspected the learning premises, such as lecture halls, seminar rooms, classrooms, library, and computer classes. Moreover, experts had the opportunity to see the equipment and the capacity of the laboratories and to attend a lecture.
The following five Bachelor study programs were subjects of the periodical evaluation procedure:

**Faculty of Economic Sciences:**
- “Economy of Trade, Tourism and Services”
- “Finances and Banks”

**Faculty of Geography:**
- “Tourism Geography”

**Faculty of Law:**
- “Law”

**Faculty of Psychology and Educational Sciences:**
- “Psychology”

The Accreditation Commission of the AHPGS nominated the following experts to conduct the on-site visit:

**As representatives of academic institutions:**

**Alexander Bordan (B.A.)**  
Albert-Ludwigs University Freiburg, Germany

**Prof. Dr. Barbara Bräutigam**  
Neubrandenburg University of Applied Sciences, Germany

**Prof. Dr. Ursula Fasselt**  
*Frankfurt University of Applied Sciences, Germany*

**Prof. Dr. Thomas Hillecke**  
SRH University Heidelberg, Germany

---

¹ The experts shown in italics did not participate in the on-site visit of the University.

The expert group surveyed the proper implementation of the criteria, standards and performance indicators, as specified in the above mentioned legal texts as well as the compliance of the program with the normative criteria, as stated in the “Methodology”.

The documents submitted by the University, the experts’ feedback to the documents, the observations made during the on-site visit, the results of discussions with the representatives of the University serve as the basis for the statements made in the Expert Report. Since the Expert Report investigates the fulfilment of the standards and criteria specified in the “Methodology”, the
structure of the Expert Report follows the logical succession of these criteria, as they are formulated in the document.

The following Fields of Activity pertaining to the program and the University were assessed by the expert group with respect to the corresponding criteria and standards: (A) Institutional capacity, (B) Educational effectiveness, and (C) Quality management, each with the corresponding Criteria and Standards.
2 The study program to be accredited

The study program “Psychology” is offered by Dimitrie Cantemir University of Targu Mures, Romania, Faculty of Psychology and Educational Sciences. The period of education is six semesters (three years).

The program is taught in Romanian. The main objective of the study program “Psychology” is to provide basic as well as specialized training in the field of psychology. Graduates should be able to work as psychologists in various fields. 180 credit points (CP), i.e. 30 CP per semester, according to the European Credit Transfer System (ECTS) are required in order to graduate from the program. One CP is equivalent to 25 workload hours. The total workload of the program constitutes 4,802 hours, of which 1,698 are contact hours, 480 are practical training hours and 2,624 are independent study hours. To the total amount of 180 CP are virtually added for the thesis (see B.1 in detail).

The program consists of 61 modules. All modules are program-specific modules and have to be completed within one semester. Modules are divided into compulsory and optional. Both types are obligatory parts of the curriculum.

Admission requirements are centralized within the University. They include a Baccalaureate degree or equivalent diploma. Foreign students have to provide a Romanian language certificate (level C1) issued by institutions authorized by the Ministry of National Education. Students are informed about the amount of the tuition fees in advance.

Upon graduation, students are awarded a Bachelor graduation diploma (Diploma de Licenta, cf. Law of National Education no. 1 from 2011), as well as a Diploma Supplement, composed in both Romanian and English. Graduates of the Bachelor study program “Psychology” are awarded the academic degree “Bachelor of Psychology”.

---

2 The University explains the discrepancy (180 CP * 25 hours = 4,500 hours in theory but 4,802 hours virtually) as follows: “In certain modules, the number of allotted hours exceeds the number of hours required for obtaining the credits, but does not reach the required number for obtaining an additional number of credits. For example, Personality Psychology has 4 credits, and the total number of hours is 112. In this case, the 12 hours are recorded on top of the 100 required for obtaining credits), but they are not enough for granting 5 credits to the module. Adding up these hours explains the difference between the total study program hours and the 4500 hours required for the 180 credits”. The University also points out that rounding up or down the amount of hours is possible and common due to the Romanian Law of National Education.
The experts take note that the formal requirements of the study program are in accordance with the national Romanian requirements.

The first cohort of the “Psychology” study program was admitted in 1993. The program was evaluated by ARACIS in 2005. As a result, it was accredited by the Order of the Minister of National Education no. 136/2005 from MO 434/May 20, 2005.

Currently, 248 students are enrolled in the program. The total number of graduates through the winter semester 2017/2018 was 654. Annual admissions are organized in two sessions during July and September. According to the numbers provided, the amount of enrolled students as well as the dropout rate have decreased over the years.

The University states that the profession of psychologist is among the specializations needed by the Romanian job market until 2020.

The University with its Administration Board confirms in a formal declaration that it is prepared and able to provide the financial support necessary for the effective functioning of the program in conditions that correspond to the standards of the Romanian program of studies.
3 Expert Report

At the beginning of September 2017, the application documents of the University were made available to the expert group for written evaluation. The expert group assessed the “Psychology” study program based on the Romanian standards and regulations specified under Section 1. They have also examined the factual and other program-related aspects described in the documents. The results of this review were forwarded to the AHPGS in January 2018.

Based on the written evaluation of each expert and the on-site visit, the expert group jointly agreed upon an expert report.
A. Institutional Capacity

A.1. Institutional, administrative and management structures

Dimitrie Cantemir University (hereupon: the University) was founded in 1991 and functions as a private university accredited by Law no. 136/2005, published in the Official Gazette no. 434 2005 part I. In 2006, the University was certified by the Romanian Agency for Quality Assurance in Higher Education (ARACIS). Based on that, it is assured that the University meets the requirements set by the national Romanian Quality Assurance Agency for Higher Education. Moreover, in 2014 the University was also subject to an Institutional Audit carried out by AHPGS.

Currently, the University has six faculties: the Faculty of Law, the Faculty of Economic Sciences, the Faculty of Geography, the Faculty of Psychology, the Faculty of Medical Dentistry, and the Faculty of Balneofiziokinetotherapy. Moreover, there is the Department of Continuous Training, the Department of International Relations and the Department of Practice to ensure the complementarity and the proper working of different activities within the University and the community. There are eight Bachelor degree programs and seven Master degree programs offered by the University. In the winter semester 2017/2018, there were a total of 1,002 students enrolled, 662 studying for a Bachelor’s degree and 340 for a Master’s degree. Moreover, 184 pursue the “Teacher Training Program” in parallel to their Bachelor or Master studies. Thereof, eight students currently are international students (Erasmus incoming students).

The expert group assessed the compatibility of the written documentation and the University’s mission and objectives. Based on the information provided in the written documentation, the experts have determined that the main objective of the University is to offer a variety of higher education study programs. The programs aim to meet the needs of the Romanian labor market and comply with national and international standards of education. The experts discern that there is a good regional focus. One of the main tasks of the University is to contribute to the social and cultural life of the local community of Targu Mures. Moreover, through the “Teacher Training Program”, the University also strives to professionalize teachers in Romania. Missions and objectives are clearly stated, and the institution supports the program and staff in line with
the aims and objectives of the program and common standards of integrity (e.g. see “University Charter” and “University Code of Ethics”).

With a glance at the study programs currently offered at the University, it becomes clear that the formulated mission and objectives are coherent. However, with the two new programs offered (“Dental Medicine” and “Balneofizioterapy and Recovery”), the portfolio of the University is expanding to health-related study programs as a new field for the University. From the perspective of the experts, it is sensible expanding the existing fields of the University. Nevertheless, the University should keep in mind that economical and market-based objectives could eventually collide with the academic freedom. In addition, an increased orientation towards sustainability (specifically in the ecological sense) would be a desirable direction of development.

Another aspect of the University’s mission is to sustain and further intensify research activity among students with the goal of enabling them to contribute to the general advancement of knowledge in their respective fields.

With regard to the administrative structure concerning the collaboration between the department, faculty and University units, the experts encourage looking for common interests and to combining forces and resources. This will also help to facilitate the coordination of research activities.

The expert group has been convinced of the University’s commitment – as an institution – to offer high quality education opportunities. It was asserted that the University and its study programs function within the Romanian legal framework and that the institution promotes academic integrity and freedom among its students. Besides, the University regularly monitors its own activities, and students take an active part in management. Moreover, the needs of students with disabilities are taken into consideration (admission, exam requirements).

Internal assessment and audit processes take place in order to monitor the achievement of the objectives of the University. The experts have observed an active collaboration between the administrative and teaching structures. Moreover, they have identified a clear division of the hierarchical units and their functions in the University. The University has developed an ethical code of which its members are aware.
Regarding the internationality, the experts took noticed the measures put in place by the University in order to pursue its international orientation. The University achieves mobility of its students by means of the European Credit Transfer System (ECTS) as well as taking part in Erasmus exchange programs. The study recognition under the Erasmus program is seen as a strength. Still, from the experts’ point of view, the University, apart from maintaining its significant role in the region, should present its internationalization measures in a more open and distinct manner (e.g. advertising English-taught programs more prominently). This way, it could further promote its attractiveness and unique character, which differentiates it from other higher education institutions. Moreover, regarding Erasmus partnerships with German universities are recommended especially since the region has a strong historical connection to Germany. In addition, setting up “international summer schools” could help to establish connections between international students and students of the University.

The experts recognize the possibilities for further development in the strategic alignment of the University in general.

Taking these facts into account, the expert group regards criterion A.1 as fulfilled.

**A.2. Material resources and infrastructure**

Overall, the experts recognize that the University has sufficient material and financial resources with regard to the study programs currently being offered. Facilities are fully in possession of the University. According to the “Declaration of the Administration Board of Dimitrie Cantemir University”, the institution possesses sufficient financial resources and equipment for the program. Furthermore, a scholarship system has been established. Looking at the premises and resources available for the desired number of students in the study program “Psychology” (100 per year), the experts conclude that the University can offer this number of study places. The experts also point out that scholarships are foreseen in the “Internal Regulations” of the University.

Furthermore, with regard to the library and lecture halls, the experts assess that the lecture halls and seminar rooms are sufficiently equipped for providing adequate teaching and learning processes (e.g. computers). It became clear though that the program-specific literature is insufficient. The experts urge the
University to extend the library significantly both regarding printed and electronic books as well as databases (e.g. PsycLIT, PsycINFO, PubMed, PSYNDEX). In this regard, the expert group encourages the University to establish more partnerships with similar national and international institutions (libraries, publishing houses) in order to provide students and teachers’ access to an even wider range of databases as well as learning and scientific material.

With regard to the aspect of financing, the experts recognize that the University, whose main source of funding is students’ tuition fees, is quite restricted in terms of finding new financial sources. This is caused by the declining number of students in the region as a result of significant demographic changes in Romania. As a response to the current difficult situation, the experts recommend the development of a fundraising system in order to generate external financial support for the students. This system should include local industries, private donors and alumni.

Taking into account the University’s endeavor to enhance its infrastructure and to improve the teaching and learning settings, the expert group considers criterion A.2 to be partly fulfilled.

The University has to provide students with a wider range of databases as well as learning and scientific material (e.g. current international textbooks).

B. Educational Effectiveness

B.1. Content of the study program

The study program “Psychology” is affiliated with the Faculty of Psychology and Educational Sciences. The study program’s mission, general and specific learning objectives, curriculum and outcome competences were presented in the written documentation. The curriculum description specifies the qualification objectives, competences (knowledge and understanding, explanation and interpretation etc.) and learning outcomes for each module. The experts point out that the structure of the study program includes a set of relevant topics.

On the one hand, the curriculum consists of the main areas of psychology including general psychology, personality psychology (differential psychology), social psychology, developmental psychology, neuropsychology as well as research methods and some other associated contents. On the other hand, the
curriculum seems to be very broad in comparison with international standards. Therefore, the program may harbor the danger to be less deep. Internationally it is uncommon that basic psychology programs include special modules in e.g. ethno psychology, psychology of religion, management psychology, forensic psychology, military psychology. Nevertheless, main psychology contents are included. Moreover, philosophical contents enrich scientific thinking.

The study program’s goal is to teach students basic as well as specialized knowledge in the field of psychology. Graduates should be able to work as psychologists in various fields. According to the COR (Classification of Occupations in Romania) the University provides a list with the following examples of career opportunities: clinical psychologist; psychological counseling psychologist; work and organizational psychologist; educational, academic and vocational counseling psychologist; psychologist in the specialization psychology applied to national security; forensic psychologist; psychotherapist; school psychologist; psychology researcher; psychology researcher assistant.

The students should acquire professional skills that enable them to perform analysis and synthesis of informational content, to operate with abstract concepts, to perform informational transfer, and to apply existing psychological theories to concrete life situations.

The experts agree with the above mentioned qualification objectives. Moreover, the study program “Psychology” also focuses on qualifying students for social responsibility and personal development throughout all modules. The experts conclude that graduates have good employment opportunities on the Romanian job market.

The curriculum of the study program “Psychology” comprises of compulsory and optional subjects. Compulsory and optional subjects are an obligatory part of the curriculum. Regarding the optional modules, students have a choice between two (or more) modules: “English” or “French”, “Sociology” or “Cognitive and clinical neurosciences”, “Advertising psychology” or “Epistemology”, “Psychology of creativity” or “Ethno psychology”, “Psychology of family” or “Intercultural psychology”, “Cultural anthropology” or “Logic”, “Speech therapy” or “Psychiatry”, “Forensic psychology” or “Psychology of religion”, “Qualitative research methodology” or “Superior data analysis”, “Psychological testing (projective techniques)” or “Military psychology”. Credit points allocated to the subject “Physical Education” will be added on top of the 180
credit points obtained by the students upon graduation and will be mentioned separately in the transcript of records. The experts take note of the large range of diverse contents. The program considers exceptional interests e.g. cultural anthropology or psychology of creativity. Furthermore, the consideration of other languages is highlighted by the expert group.

The experts appreciate the optional modules which complete the offered courses very well. The program is also well structured; modules are described in detail (e.g. with objectives, aimed competences, content and literature) and the program is relevant as the intended career is clear. Nevertheless, the experts are critical of the fact that curriculum includes modules that can normally not be found in a Psychology curriculum, e.g. “Physical Education” and “Speech therapy”. To sum up, the curriculum appears to be very broad and the construction of the study program does not seem very consistent. The order of the specific modules is not clear for the experts and there is no plain distinction between the contents of the modules (e.g. psychopathology and psychiatry). Moreover, contents like self-experience or training of communication skills are completely missing in the experts’ opinion. Furthermore, looking at the module descriptions there are nearly only references to Romanian literature; thus, the international state of the art is not considered sufficiently (international textbooks are missed in the library, e.g. Zimbardo could not be found which is an international standard). The outcome of English language courses could be enhanced by using scientific English-language literature.

It remains unclear what the understanding of the subject / the science of psychology is? And how psychology is differentiated from other sciences – special education or orthopedagogy for instance?

The experts take note of the fact that approximately 80 % of the curriculum is laid down as a rule on a national level, this includes also the module titles and in addition the title of the study program. From the experts’ point of view, this appears to be quiet restrictive and, thus, limiting the academic freedom. The experts encourage the University to use the academic freedom wherever possible to sharpen its profile and strategy as well as to adhere to European standards, striving to become relevant in an international context by defining its unique selling point and a special profile.
Alongside the theoretical curriculum, practical training (16 CP) is part of the curriculum. The practical activities are carried out in the following forms: clinical practice (during semesters three and four), industrial practice (during semester five and six), and specialized practice for preparing the final thesis (during semester six). The experts take note of the cooperation agreements and come to the conclusion that the University carefully selects its cooperative partners. It became sufficiently clear that the University strives to offer the same quality of practical training for all students at various cooperation partners. Nevertheless, the University should try to collaborate with international employers to offer the students perspective and various possibilities for practical training. In addition, the experts deem it important to include more mandatory practical trainings in the curriculum.

The expert group points out that also research elements are integrated in some modules. In order to write the license thesis, students have to take part in the module “Specialized practice for preparing the bachelor degree thesis” (5 CP) which takes place during the sixth semester and is supervised by the license project coordinator. Hence, students develop a basic understanding of qualitative and quantitative research. They also develop the ability to plan and conduct a fundamental or applied research in their area of expertise. The experts strongly recommend using synergies by increasing interdisciplinarity among the study programs wherever possible, e.g. when communicating research methods. Besides, as psychology is a basic science, the program could help improve the research in general at the University.

The credit system applied in the “Psychology” study program and at the University in general complies with the Order of the Romanian Ministry of Education no.3617/2005 on the generalized application of the European Credit Transfer System.

The subjects in the curriculum can be evaluated at the end of the semester through: written exams (such as multiple choice test) and oral exams (colloquiums). The evaluation is based on the specific procedures stipulated by the Quality Manual. Usually one assessment method is applied per module. The experts highlight that all exams should be competence-oriented, thus multiple-choice tests should be reduced if not discarded in general. On the one hand, multiple-choice tests are objective but on the other hand they hold the danger that learning outcomes are not sustainable, that learning outcomes do not
reflect the competences needed in real world jobs and therefore these tests lack in external validity. Summarized, the university should realize constructive alignment between learning contents and exam forms as well as between learning outcomes and competences needed in the job.

There are winter and summer exam sessions. They extend over a period of three weeks after the period of teaching activities. Should a student not pass the exams during these sessions, reexaminations may be taken (on a fee) during a reexamination period. Reexamination periods take place after each academic year. Each discipline may be reexamined four times. If a student fails during the reexamination period, he or she has to repeat the failed modules and can resit the exam in the next year. There is no limitation regarding the participation in reexamination periods or repetition of failed modules. In comparison to European standards this is a questionable point for the experts. Thus, the University should limit the number of reexaminations.

For the evaluation of the students’ performance in exams, the University applies a 10-point grading system (10 being the highest grade). The minimum passing grade is 5 points. Verifications may also be graded with the qualifications ‘passed’ or ‘failed’. The minimum grade for passing the graduation exam is 7.

The study program “Psychology” is completed by composing a Bachelor thesis (10 CP). The license exam consists of presenting and defending the license project. Graduates who did not write a license can obtain the license in the following years. Until then, they receive a certificate attesting that they attended the faculty courses, but are not yet licensed.

The Bachelor degree examination takes place in accordance with the Ministry Decree regarding the general framework for organizing final examinations in higher education and based on the institution’s own procedure approved annually by the University Senate. The Bachelor degree examination can consist, according to regulations in force, of two tests, as follows:

a) test 1: assessing fundamental and specialized knowledge
b) test 2: presenting and defending the Bachelor’s thesis

According to the new “Specific Standards regarding External Academic Quality Assessment for Associated Bachelor and Master level studies” the number of credits allotted to the promotion of the license thesis (10 CP) is added to
the 180 ECTS credit points for the entire program. From the experts’ point of view, the thesis is an obligatory part of the curriculum. Thus, the final thesis should be part of the official workload of the study program. Nevertheless, the experts acknowledge that the addition is a singularity in Romania due to the National Law.

To conclude, the European perspective could be more emphasized in the curriculum both regarding content and structure. Hence, the University should try to close some gaps (e.g. workload, examination) in order to guarantee international applicability of the Romanian degree in other European countries. In this regard, the experts also want to draw attention to the process of recognizing externally achieved credit points. The University recognizes credits obtained at other universities if they comply with the regulations on students’ professional activity; the equivalence of credits is evaluated by an internal credit recognition committee inside each faculty. From the experts’ point of view, the recognition of credits transferred from other universities (national and international) should be regulated according to the requirements of the Lisbon Recognition Convention, i.e. the burden of proof to demonstrate that an application does not fulfill the relevant requirements lies with the body undertaking the assessment.

The “Psychology” study program contains 180 + 10 credits. The curriculum is comprised of 61 modules. The program is only offered on a full-time basis (six semesters/three years). The total workload of the program is 4,802 hours, which is divided into 1,698 contact hours, 480 hours of practical training and 2,624 hours of individual work hours.

From the experts’ point of view, the student workload should be evaluated on a regular basis in order to make sure that students are not overloaded or underchallenged. Additionally, the implementation of evaluation results to improve the study programs should be clearly documented. The experts also suggest combining smaller modules into larger units to emphasize competence.

---

3 (Art 3.3 (5)); Each Party shall recognize periods of study completed within the framework of a higher education program in another Party. This recognition shall comprise such periods of study towards the completion of a higher education program in the Party in which recognition is sought, unless substantial differences can be shown between the periods of study completed in another Party and the part of the higher education program which they would replace in the Party in which recognition is sought (Art.5.1 (1))
According to the University, the admission requirements are centralized within the University and, thus, no specific requirements are given for the bachelor study programs. General admission procedures are stated in the operational procedure “Admissions to Study Programs”. The admission requirements include a Baccalaureate degree or an equivalent diploma. The University assures to prioritize academic equality and enforcement of the ethics policies contained in the Code of Ethics and Professional Ethics, amongst others. Thus, students may apply for academic or social welfare scholarships in order to assure equality throughout the University.

Annual admissions are organized in two sessions during July and September. Foreign students must submit a Romanian language certificate (level C1), issued by institutions authorized by the Ministry of National Education.

From the experts’ point of view, the admission procedure of the program complies with the requirements of the University as well as with the national standards. The general recruitment and admission policies for students of the University are clearly stated. The University makes it also clear that all discrimination is prohibited.

Based on the described conclusions, the expert group considers criterion B.1 to be partly fulfilled.

The number of reexaminations must be limited.

The recognition of credits transferred from other Universities (national and international) has to be regulated according to the requirements of the Lisbon Recognition Convention.

**B.2. Learning outcomes**

From the experts’ point of view, the “Psychology” study program can be successfully classified within the Romanian higher education system. The final qualification gained by its graduates corresponds to the demands of the Romanian labor market. The knowledge, competencies and abilities gained throughout the study program correspond to the final academic certificate to be awarded. The practical activity, which has been described under criterion B.1, enables students to adapt to real life circumstances and to directly apply their theoretical knowledge. Moreover, graduates of the Bachelor study program have the opportunity to apply for a Master study program at the Univer-
The University states that the study program had a total of 205 graduates (163 of these graduates finished with a Bachelor thesis). 72.8% of the 205 graduates have enrolled in Master study programs, e.g. “Clinical Psychology and Intervention Techniques through Counselling and Psychotherapy”. Those graduates who are not enrolled in Master study programs are mostly employed. Of those graduates who are employed, 21.1% are employed in the field of psychology (i.e. school psychologists, psycho-pedagogues, clinical psychologists in state or private institutions) and 78.9% are employed in other fields.

Judging from the curriculum and the module descriptions, students completing the program obtain a thorough overview on psychological topics. Still, in the opinion of the experts, the European perspective could be more emphasized in the curriculum.

The teaching and didactic methods are student-centered, focusing on two main methods during contact hours: demonstration-based learning and critical thinking strategies. From the experts’ point of view, there is a good mix between methods including interactive learning methods (e.g. working in groups). In addition, the small cohorts are advantageous. According to the University, the main responsibility of each course instructor is to apply student-centered methods of teaching and to create a productive learning environment. Furthermore, course instructors are responsible for the development of students’ degree-specific as well as general competences, which are specified in the course descriptions provided by the University.

The expert group thinks that employability is given for graduates of this program. The experts conclude that this positive outcome and development stems on the one hand from the curriculum but on the other hand also from the open atmosphere and communication ethics at the University. Regarding student support measures, tutors who oversee most of the pedagogical support and guidance of the students serve as mentors throughout the course of the study program.

The expert group considers criterion B.2 to be fulfilled.

**B.3. Scientific research activity**

The Study Program “Psychology” has its own scientific research plan included in the strategic plan of the University. Together with students and graduates,
the faculty organizes scientific sessions, workshops and seminars. It also supports the participation in international conferences and workshops, as well as publications in national and international journals.

The experts conclude that research is carried out by staff. This is documented by the overview of publications. Validation criteria for research activities are provided. However, the number of peer reviewed articles with impact factor as an indicator of high quality research seems very low. There exists a “Scientific Research Strategic Plan” but this plan only reveals individualized research goals instead of conceptual strategic considerations of the faculty or institution about future research topics and aims and means to reach these goals. Staff in the faculties should strive for more public, international, ideally peer-reviewed methods to disseminate their results. In terms of further development opportunities, the experts recommend developing an overall research strategy with goals and means of the faculty or institution and strategic considerations about a coherent research policy and research topics based on long-term considerations. Moreover, the evaluation of research should be clearly documented. In addition, the University should bear in mind that cooperation can turn into competition between researchers and could, thus, eventually become problematic. The expert group also recommends increasing the research activities among students, assuming that this will also have, very likely, a positive effect on structuring students’ independent study hours.

The research activity is materially supported by the Dimitrie Cantemir publishing house, which facilitates the release of conference papers and publications.

Criterion B.3 is regarded as fulfilled.

**B.4. Financial activity**

Currently, the University holds and receives revenue for running study programs. Nevertheless, it could also be helpful for a sustainable financing to look for other financial options besides levying tuition fees on students (e.g. sponsoring, research, further education; see also A.2).

The University has confirmed in a formal declaration that they are “prepared and able to progressively ensure, for all years of study, the financial support necessary for the program to function in conditions that correspond to the standards of the Romanian program of studies”.

21
Criteri

Criterion B.4 is regarded as fulfilled.

C. Quality Management

C.1. Quality assurance strategies and procedures

The University has developed an elaborate quality assurance system implemented by means of corresponding evaluation procedures. The University presented its quality assurance system in the written documents.

The quality assurance system of the University consists of the following units: the Senate of the Dimitrie Cantemir University, the Quality Management Commission (QMC) and the Quality Management Representative (QMR). The members of the QMC and of the Quality Assurance Department are approved by the University Senate. Department managers are in charge of monitoring the quality assurance at the faculty/department. The University has developed a “Quality Manual” which defines the objectives and the organizational structure of quality assurance procedures, as well as units involved in it. The experts point out that the Quality Manual refers to ISO 9001:2001. The standards have been revised though in 2015. Hence, the manual should be revised according to ISO 9001:2015.

With regard to the transparency of the quality assurance policies and developments, the University issues an annual “Internal Evaluation Report”. After approval by the University Senate, the report is published on the official website of the University at the end of each academic year.

The process of quality assurance can be described as follows: The Quality Assurance Committee of the faculty submits its conclusions regarding the internal audit report, along with the results of peer reviews, to the Faculty Council. At the end of each year, the data for the given period, including evaluations of teaching performance, are gathered and directed to the Senate which takes corrective actions and issues the quality improvement plan.

The University has an internal quality management system. Students take part in the quality management system; they are required to fill out course evaluations and provide feedback on the teaching performance. The results are processed by the Quality Assurance Committee, which then integrates the final recommendations into its report. The results of the teaching staff assessments are presented annually in the Senate where student representatives take part.
The experts highlight that students as well as teaching staff evaluate the curriculum of the Bachelor study program “Psychology”.

The experts suggest that the University attaches greater importance to the feedback of the evaluation results by the students (e.g. regarding workload). This is imperative for a functioning quality management system since this is the only way to verify the measures taken by the students. Correspondingly, the University could optimize its system in such a way that the feedback of the results is given regularly to the students and openly discussed with them.

With regard to the students’ development of social responsibility and personal development in the course of studies, the University points out that it has its own University Ethics Code. The code lays down rules of conduct, ethics and deontology for all members of the academic community of the University.

Considering the thorough implementation of the quality assurance system and the active participation of all University members in quality assurance procedures, the expert group concludes that criterion C.1 is fulfilled.

**C.2. Procedures on the periodical initiation, monitoring and revision of the programs and activities carried out**

The experts highlight that the quality management system is ensured by central and decentral commissions and a quality management department. The commissions act in accordance with the quality assurance strategy of the University. Moreover, a “Quality Manual” is approved by the Senate for each study year. Students assess all teaching staff regularly.

The University implements procedures of periodical revision and evaluation of the study programs offered. Hence, the teaching staff is required to conduct annual self-evaluations and peer-assessments; students evaluate the teaching process every six months.

The experts conclude that the study program is evaluated by different stakeholders on a regular basis by means of rational and effective methods.

The assessment of the teaching personnel is discussed in detail below, under criterion C.4.

The experts underline that the quality assurance system of the University enables productive application of the obtained teaching and learning evaluation results. This refers to the introduction of necessary corrective measures...
and better organization of the programs, as well as the improvement of teaching methods, envisaged in upcoming academic years.

Considering these facts, the experts conclude that criterion C.2 is fulfilled.

**C.3. Objective and transparent procedures of learning results evaluation**

Based on students’ evaluations, the teaching process and the learning outcomes undergo a constant optimization process. Additionally, the University has established clear examination rules and a structured process for dealing with exceptional cases (“Examining Students”, “Credit Allocation”, “Students Evaluation Methods” and “Students with Locomotor Disabilities and Chronic Diseases”). Furthermore, the form of examination and the learning outcomes is clearly specified for each module.

In order to qualify for the final examination of a module, students must have met all subject requirements: attendance, passing the ongoing assessments and practical works. These are presented to the students by the lecture coordinator in the first course lesson.

The final assessment in each course can be conducted in the form of a colloquium or an examination. Colloquiums are forms of oral examinations taken in, for example, optional courses.

Students’ actions in case of appeal and re-examinations are well-defined and described in the regulations of the University. Hence, there are clear procedures established for the above-mentioned examinations and students are informed of these procedures in advance. The main function of examinations conducted in the program is to objectively evaluate students’ achievement of the specific learning outcomes.

The experts sum up that criteria and regulations about grading are present *(see B.1 for details)*. The forms of examinations generally fit the competence aimed for by the study program and the modules. The evaluation of learning outcomes is, thus, appropriate.

Taking the above described facts into account, the expert group concludes that criterion C.3 is fulfilled.
C.4. Periodical evaluation procedures of teaching staff quality

The University has provided an overview about the teaching staff of the study program.

13 teachers are involved in the “Psychology” study program: four professors holding a Ph.D. in Psychology and Sociology (31 %), three associate professors (23 %), two assistant professors (15%), and four junior lecturers (31%). The coordinator of the study program is the dean of the Faculty. The ratio of full-time teachers to students is 1 to 17.8.

The experts take note that all teaching positions are established in compliance with the requirements of legal norms and completed with tenured teaching staff in higher education in accordance with the Romanian law. The University has attached the “Compulsory and Necessary Minimum Standards for Awarding Didactic Titles in the Higher Educational System, Professional Degree of Research-Development and the Authorization Certificate for the Scientific Fields Pertaining to the Panel on the P4 Fundamental Fields – Social Sciences within the National Council for the Attestation of Academic Titles, University Diplomas and Academic Certificates”, thus, substantiating the adequacy of the teaching staff in setting general quality standards.

Overall, the teaching and academic staff of the University shows a high level of commitment for the execution and further development of the study program. Still, from the experts’ point of view, it is desirable to increase the percentage of professors in the program.

Teachers’ performance is evaluated at the University every year by a third party. Mutual respect is conduced and confidentiality is guaranteed between the rector, dean and the evaluated teacher. Results of these annual evaluations serve as the basis for promotion proposals. The selection and employment of teaching staff are based on the principle of public contest; these procedures are regulated by the University’s “Methodology of contest for occupying the open didactic and research positions from Dimitrie Cantemir University from Targu Mures“ as well as by the Romanian legal requirements (Law of National Education no.1/2011, Government Decision no.457/2011, Government Decision no.36/2013, Order no.6560/20.12.2012, Order no. 4204/15.07.2013). According to these regulations, teaching and other positions are publicly announced and the University chooses candidates for these positions based on an open and independent procedure. These procedures are
transparent and available for potential candidates from the academic as well as from the work field. By means of such transparent contest regulations, the University seeks to strengthen its competitiveness together with its national and international visibility.

Regarding the measures for human development, the University has established the “Teacher Training Department”, which has a didactic and scientific research mission, in the area of the training of the didactic personnel. The “Teacher Training Department” follows national level guidelines.

The teaching staff is periodically evaluated by means of both peer and anonymous student reviews. Student evaluations are performed at the end of each semester. They are anonymous, which encourages an objective assessment. The results of the reviews are discussed in the University Senate meetings. Following these meetings, students are informed about the results of the evaluations. Should a member of the teaching staff receive an unsatisfactory evaluation result, a course of action will be implemented in order to eliminate the existing problems. Hence, the results are carefully monitored and the improvements are continuously observed. If there is no improvement after a maximum of three evaluation periods, the respective member of the teaching staff will be dismissed.

Peer evaluations are also performed regularly. They are based on the criteria of performance and human interaction. These procedures are monitored by the quality assurance unit of the department, in which the assessed staff member is tenured. Further on, peer evaluation results are analyzed and summarized by the head of the department and afterwards presented to the Faculty Council as part of the quality assurance unit.

Based on these facts, the expert group considers criterion C.4 to be fulfilled.

**C.5. Learning resources accessibility**

Overall, the experts conclude that the University offers appropriate facilities of sufficient number and good quality for the execution of its currently running study programs. The students have access to the main University Library from 08:00 a.m. to 08:00 p.m. Monday to Friday during the regular semester. During the exam session there are additional opening hours on Saturdays from 09:00 a.m. to 04:00 p.m.
After visiting the library, the experts discerned that the program-specific literature for the “Psychology” program is not sufficient. The experts urge the University to significantly expand the library in terms of printed and electronic books, journals and databases (see also A.2). Moreover, a psychophysiological lab would be useful.

The University encourages students’ learning processes by offering resources and opportunities for extra-curricular activities. Moreover, the University offers various forms of academic support and counselling to students: consultations, tutorials and therapy. However, regarding infrastructure, accessibility for people with a disability should be improved.

Furthermore, it has to be acknowledged that there are clear procedures concerning teaching staff training (“Organization and Functioning of the Teaching Staff Training Department” and “Organization and Functioning of the Continuous Professional Training and Operational Programs Department”).

The expert group considers criterion C.5. as fulfilled.

C.6. Systematically updated data base, with regard to the internal quality assurance

The University has designed an internal quality assurance system and established structures for monitoring and developing the quality assurance concept. Parts of the internal quality assurance system are regular peer and students reviews, as well as the feedback meetings organized for this purpose. A more detailed description can be found under criteria C.3. and C.4. A regular track of the evaluation and review results is maintained by the University. Strategies for improvement are designed therefrom. A corresponding electronic system and database are also implemented. The experts conclude that the data and information policy seem to be adequate at the University.

The expert group considers criterion C.6. as fulfilled.

C.7. Transparency of public interest information concerning study programs

The results of quality assurance activities are summarized in a report, in order to improve the programs’ quality.

Through its website, the University supplies relevant information concerning its programs and its structures to the public. Main parts of this information are available in English. Thus, the University promotes its study programs online,
through local printed media, and by running open days and workshops in high-
schools and other institutions. The information is also available through a
printed “Student Guide”. There is also published information concerning the
compensation regulations for students with disabilities.

The experts conclude that the faculty provides information on qualifications,
study programs, diplomas, teaching and research staff, student facilities and
any other aspects. The website should be revised though in order to offer the
latest and relevant information.

All in all, the expert group considers criterion C.7 to be fulfilled.

C.8. Functionality of education quality assurance structures, according to the
law

The expert group was provided with an overview of the quality evaluation
mechanisms and institutional structures. The Quality Management Commis-
sion regularly elaborates and reviews all corresponding policies and strategies
as well as operational procedures. The expert group is convinced of the validi-
ty of the information provided in the application documentation, and its ac-
cordance with the legal framework, as stated in the “Quality Manual”. Quality
assurance and evaluation for the currently running programs is well developed
at the University.

Structured processes and an evaluated organization underline the importance
of the quality management at the University; the organization strives for con-
tinuous improvement. Central and decentral staff are involved in the quality
assurance process. The experts conclude that the institutional structure for
quality education seems to be adequate. Thus, criterion C.8 is considered to
be fulfilled.

For more details on the structure, functioning and members involved in the
Quality assurance procedures at the University see also criteria A.1, A.2 and
C.1.
4 Evaluation Summary

The main task of the expert group during the peer review was to assess the running “Psychology” study program and to verify its compliance with European and Romanian regulations (see part 1 Introduction).

In the view of the expert group, the “Psychology” study program complies with Romanian regulations as specified in the “Methodology” and the “Law of National Education”. Hence, the study program complies with the pertinent Romanian conventions as well as with all legal normative requirements.

The expert group acknowledges the high motivation and engagement of all persons involved in the program. In addition, the students are satisfied with the University and the commitment of their teachers. Nevertheless, it became apparent to the experts that the University has to close some gaps in order to guarantee international applicability of the Romanian degree in other European countries. Hence, the experts encourage the University to use the academic freedom wherever possible, to sharpen its profile and strategy as well as adhere to European standards, striving to become relevant in an international context by defining its unique selling point.

The on-site visit in addition to the documentation provided by the University, enable the expert group to recommend the re-accreditation of the “Psychology” study program offered by Dimitrie Cantemir University of Targu Mures, to the Accreditation Commission of the AHPGS.

Given the fact that the program meets all normative requirements and standards listed in the performance indicators determined by the Romanian national quality assurance agency, the expert group recommends the re-accreditation of the “Psychology” study program also by the Romanian Ministry of Education, Research, Youth and Sport.

The experts outline the following conditions:

- The University has to provide students with a wider range of databases as well as learning and scientific material. (A.2)
- The number of reexaminations must be limited. (B.1)
- The recognition of credits transferred from other universities (domestic and abroad) has to be regulated according to the requirements of the Lisbon Recognition Convention. (B.1)
At the same time, the experts attempt to provide constructive feedback and recommendations for further improvement regarding the concept, structure and content of the program.

The following recommendations are thus proposed for the University’s consideration:

A) Institutional Capacity:

- The University could present its internationalization measures in a more open and distinct manner so that, apart from maintaining its significant role in the region, the University could further promote its attractiveness and unique character differentiating it from other higher education institutions, e.g. through cooperations or summer schools. (A.1)

- The University library could establish partnerships with similar institutions (libraries, publishing houses) within the country and abroad, in order to provide students and teachers with access to a wider range of IT resources, databases as well as learning and scientific material, especially for the new programs. (A.2)

- The University could develop a fundraising system to generate external financial support for the students. This could include local industries, private donors and alumni. (A.2)

B) Educational Effectiveness:

- The University should try to collaborate with international employers to offer the students perspective and various possibilities for practical training. (B.1)

- There should be more mandatory practical trainings in the curriculum. (B.1)

- The European perspective could be more emphasized in the curriculum. (B.1)
• Interdisciplinarity among the study programs should be increased wherever possible to use synergies, e.g. when communicating research methods. (B.1)

• All exams should be competence-oriented, thus multiple-choice tests should be reduced if not discarded in general. (B.1)

• Obligatory credits to be awarded for the final exam should be part of the workload of the study program. (B.1)

• Focusing on competence, modules should be combined into larger units and the student workload should be evaluated on a regular basis. (B.1)

• An overall research strategy with goals and means of the faculty or institution with strategic considerations about a coherent research policy and research topics based on long-term considerations should be developed. Moreover, the evaluation of research should be documented. Research activities among students could be increased. (B.3)

C) Quality Management:

• The Quality Manual refers to ISO 9001:2001 and should at least be revised according to ISO 9001:2015. (C.1)

• Feedback of the results of the quality management procedures should be given regularly to the students. (C.1)

• The percentage of professors teaching in the program should be increased. (C.4)

• Regarding infrastructure, the accessibility for people with a disability should be improved. (C.5)

• The website should be revised in order to offer the latest and relevant information. (C.7)
5 Decision

Decision of the accreditation commission of May 15, 2018

The proposed resolution of the Accreditation Commission of the AHPGS is based on the University’s application, as well as the expert review and the on-site visit covered in the expert report. The Accreditation Commission has also taken the response opinion of the University regarding the study program into account.

The on-site visit of the University took place on March 11-13, 2018, according to the previously agreed schedule.

The Accreditation Commission of the AHPGS discussed the procedural documents and the recommendation of the expert group and the response opinion of the University regarding the expert report.

Based on the response opinion of the University, the Accreditation Commission takes note that special modules such as Ethnopsychology, Psychology of Religion, Forensic Psychology, Military Psychology are part of the modules highly recommended within the specific standards for Psychology by ARACIS. From an international perspective, however it is uncommon that basic Psychology programs include such modules. Moreover, the Accreditation Commission takes note that the module “Speech Therapy” is an optional module highly recommended within the specific standards for Psychology by ARACIS and the module “Physical Education” is mandatory according to the new national Romanian standards. Nevertheless, the Accreditation commission points out that both modules are again – from an international perspective – uncommon in the curriculum of a basic Psychology program.
The regulated study period in the full-time program “Psychology” is three years/six semesters. The study program comprises 61 modules of which 33 are obligatory and 28 are optional, i.e. there is a choice between these modules. The bachelor program “Psychology” is completed with the conferral of the academic degree “Bachelor of Psychology”. The study program was launched in 1993 and first accredited in 2005.

The Accreditation Commission of the AHPGS considers that most Criteria (according to the European Standards and Guidelines for Quality Assurance in the European Higher Education Area (ESG) as well as to the Law no. 1 of National Education of Romania, 2011, Art.150, and Art.193; the Quality Evaluation Activities Guide for University Study Programs and for Higher Education Institutions: Part 1 Study Programs Accreditation External Evaluation Guide, and the Methodology for External Evaluation, Standards, Standards of Reference, and List of Performance Indicators of the Romanian Agency for Quality Assurance in Higher Education) are fulfilled and therefore adopts the following decision:

The study program “Psychology” is recommended to maintain and extend the accreditation.

Based on the expert report, the Accreditation Commission outlines the following conditions:

- The University has to provide students with a wider range of databases as well as learning and scientific material. (A.2)

- The number of re-examinations must be limited. (B.1)

- The recognition of credits transferred from other universities (domestic and abroad) has to be regulated according to the requirements of the Lisbon Recognition Convention. (B.1)

For the further development and enhancement of the study program and the University as a whole, the Accreditation Commission of the AHPGS supports the recommendations articulated in the expert report.
